

# Mitigating risk of introduction and spread of marine INNS through risk assessments and biosecurity planning

Katie O'Shaughnessy & Paul Stebbing

[apemltd.com](http://apemltd.com)

# Impacts of INNS

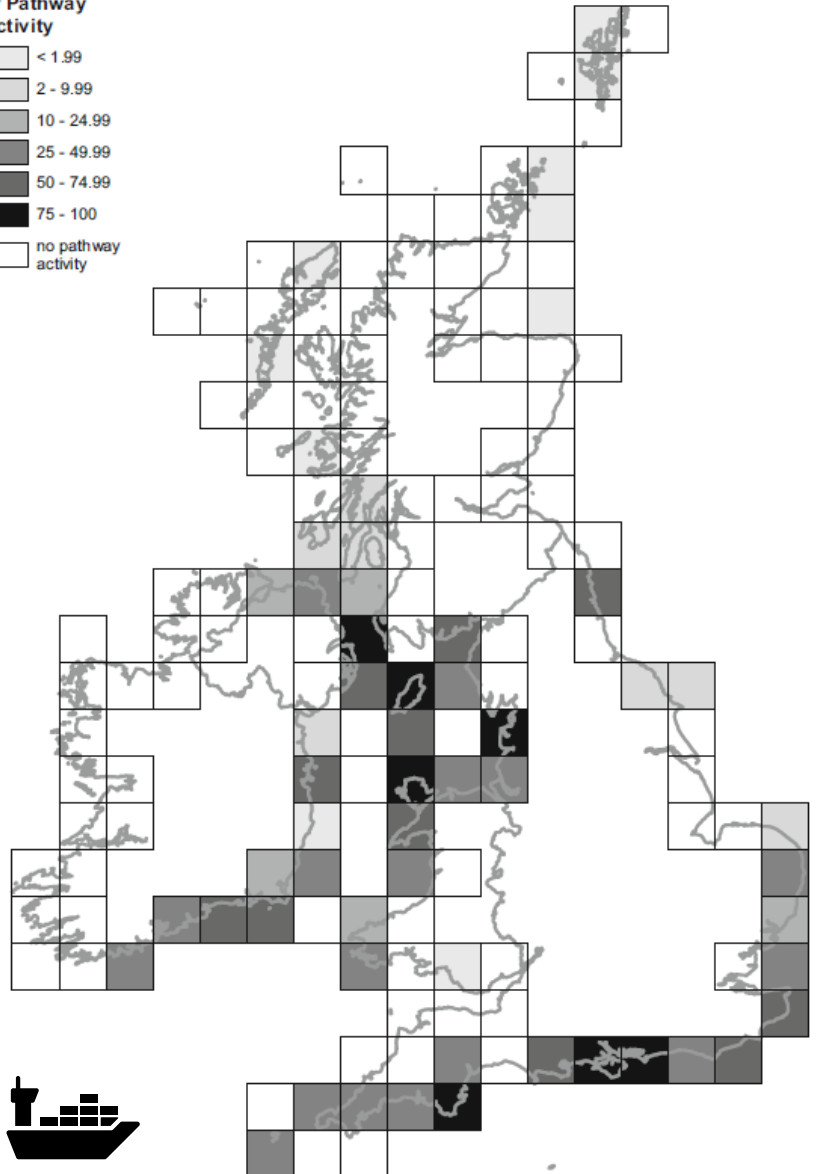

# Marine Invasive and Non-Native Species (INNS)

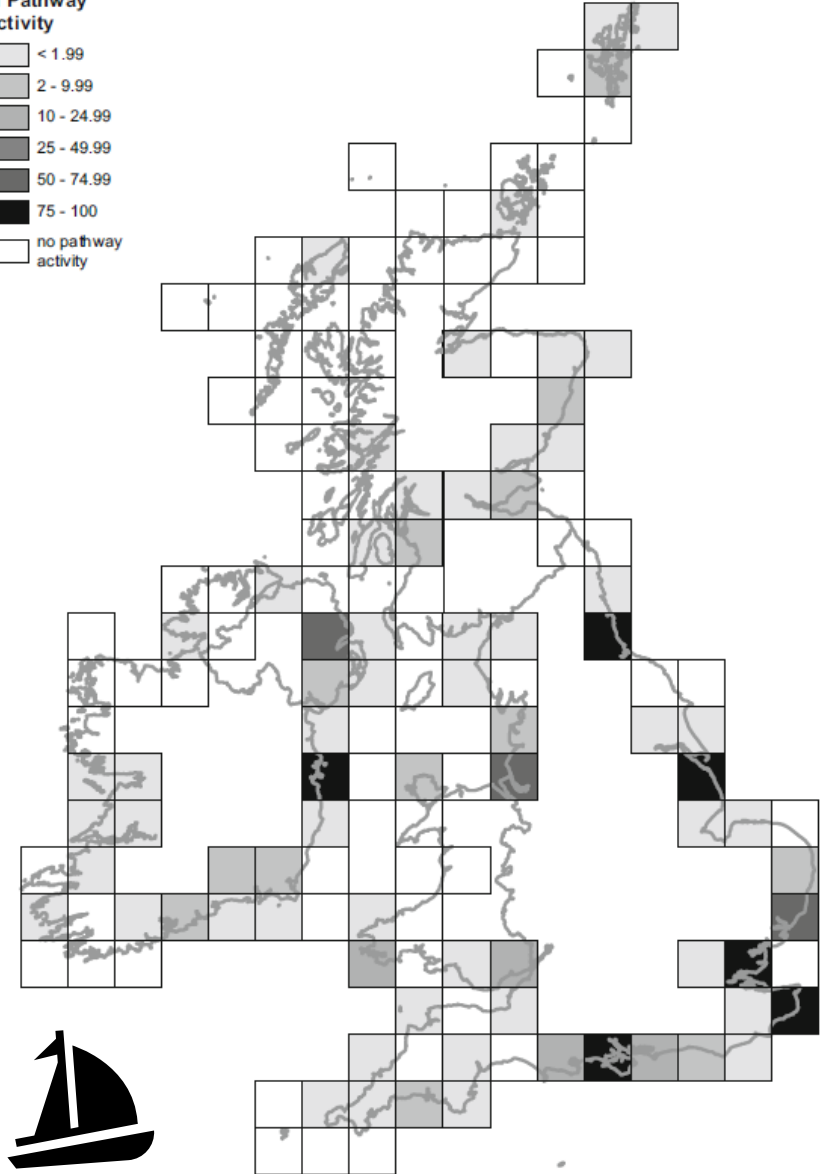

# Introduction and spread via pathways

# How Frequent

**A. Shipping**

**B. Recreational boating**

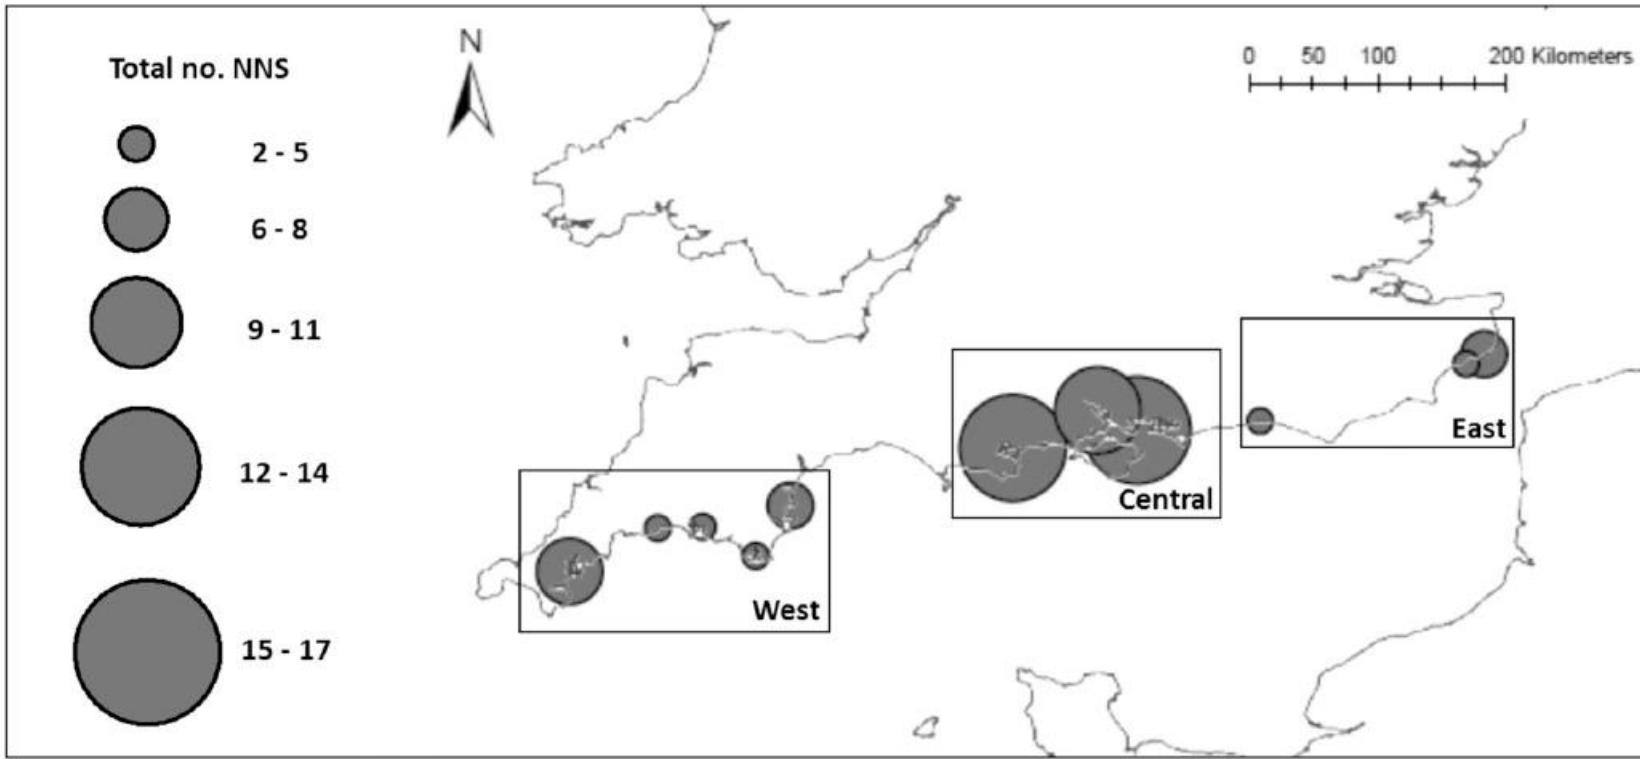

O'Shaughnessy et al. (2011); 154:111082.  
Tidbury et al. (2012); 154:111082.  
[www.marinetraf.org](http://www.marinetraf.org)

# How does this relate to The Solent?

O'Shaughnessy et al. (2020) Occurrence and assemblage composition of intertidal non-native species may be influenced by shipping patterns and artificial structures. *MPB*. 1;154:111082.

# How do we minimise introduction and spread?

## Hierarchy of management

- Prevention
- Rapid response & eradication
- Containment & long term control

# Pathway risk assessment

- Cover a single specific pathway
- Species-specific risk assessment for that pathway
- Environmental similarity risk assessment

# Asset and operations risk assessments

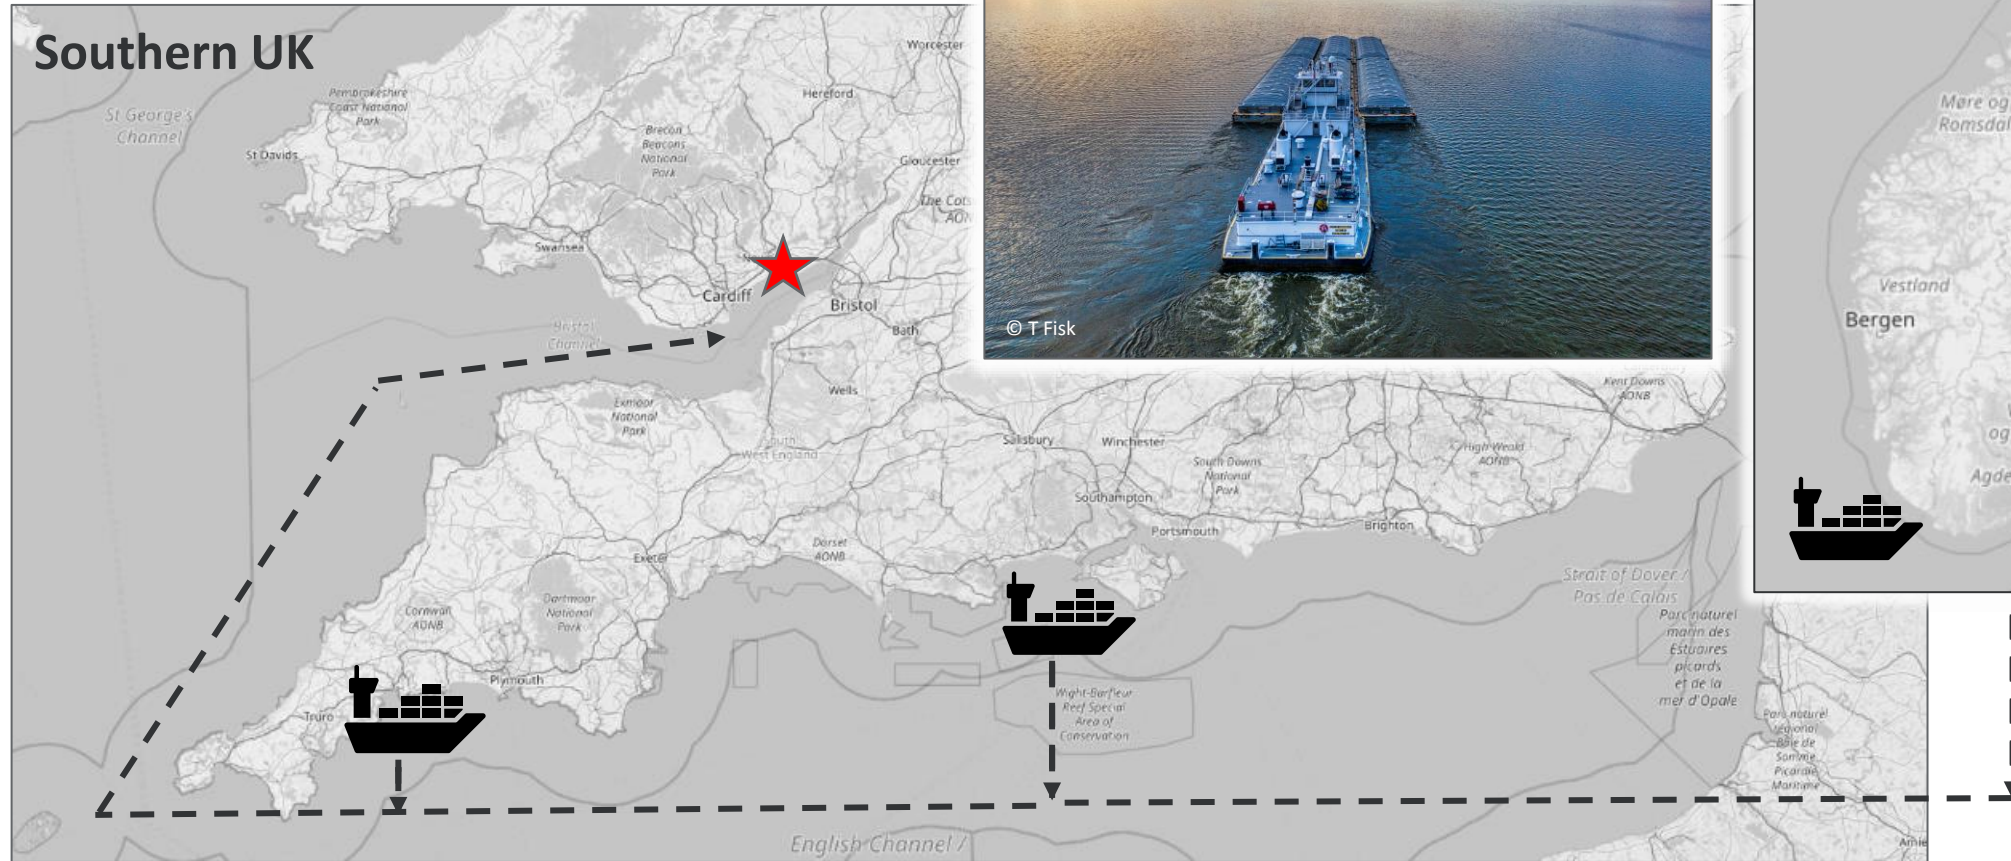

**Assets = specific location / area / infrastructure**

**Operations = specific event / temporary event**

- All relevant pathways identified
- Frequency and intensity of pathways scored
- All INNS at site identified & impacts assessed
- 'Horizon' species identified
- Comparative and repeatable so can determine hotspots if applied to multiple sites

# Operations risk assessment

# Operations risk assessment

# Species risk assessment – Horizon scanning

- What's next?
- Consensus method using technical experts
- Initial ranking by scoring
  - i) arrival, ii) establishment, iii) magnitude of the potential negative impact on biodiversity or ecosystems, human health or economies
- Discussion and review to meet consensus

# Species risk assessment – Horizon scanning

- Is this species a risk?
- Entry, establishment, spread, impact, climate change

## Entry

Estimate the overall likelihood of entry into the risk assessment area for this organism (comment on key issues that lead to this conclusion).

[Delete accordingly]

**Response:** *very unlikely* | *unlikely* | *moderately likely* | *likely* | *very likely*

**Confidence:** *very low* | *low* | *medium* | *high* | *very high*

**Comments (include list of entry pathways in your comments):**

# Biosecurity Planning

- “An ounce of **prevention** is worth a pound of cure”
- Identifies **realistic, pragmatic** and (ideally) cost-effective procedures and behaviours that reduce the risk of INNS introduction and establishment
- Highly specific to the characteristics and **activities at the site**, but there are general measures that will likely apply across all sites

# Biosecurity Planning

## Minimum requirements:

- an **introduction** setting out purpose aims and objectives
- a section identifying the **risks** that the biosecurity plan will cover
- the **biosecurity measures** by which the risks will be addressed
- how the plan will be **implemented**
- **contingency** plan for new INNS
- a **review** process

# Biosecurity Measures

£

- Raise public awareness, *e.g. Check Clean Dry campaign*
- INNS ID and monitoring training
- Biosecurity measures during events, *e.g. Participants of events to arrive with clean equipment*
- Biosecurity Manager
- Washdown and waste capture facilities
- New and developing technologies for continual biosecurity

- 

**STOP THE SPREAD**

Invasive plants and animals block waterways, harm the environment and wildlife, and can damage your boat's engine and props. They can be small and hard to spot so are easily spread on damp equipment and clothing. Protect the environment by keeping your kit free of invasive plants and animals.

Remember to check these places:

**CHECK** the water for mud, aquatic animals or plant material. Remove anything you find and dispose of it at the site. Reapply anti-fouling annually.

**DRY** as long as possible before using elsewhere as invasive plants and animals can survive for weeks in damp conditions.

Watch out for:

- ABLER SHEEP
- QUACCA MUSSEL
